Srishti Kumari

Kolkata, West Bengal, India — +91-8102393651
srishtikumari510@gmail.com — LinkedIn — GitHub

Professional Summary

MCA student (CGPA: 9.15) skilled in Python, Machine Learning,Computer Networks and Software Engineering. Hands-on experience building NLP applications, RAG systems, and ML models using Scikit-learn and TensorFlow. Proficient in REST APIs, SQL databases, and data analytics. Strong foundation in Data Structures, Algorithms, and Networking. Seeking an Software Engineering internship to apply technical skills to real-world projects.

Education

Master of Computer Applications (MCA) — 2025–Present
VIT Bhopal University — CGPA: 9.15

Bachelor of Computer Applications (BCA) — 2022–2025
Adamas University — CGPA: 9.16
Silver Medal – 9th Convocation — Merit Scholarship (2024–2025)

Technical Skills

Relevant Coursework

Computer Networks, Operating Systems, DBMS, OOPs, Data Structures and Algorithms, Software Engineering, Computer Architecture **Programming Languages:** Python, Java, JavaScript
Machine Learning: Scikit-learn, TensorFlow, NLP, Model Training, Feature Engineering
Data Analytics: Pandas, NumPy, Data Cleaning, Data Visualization
UI Frameworks: Streamlit, React (Learning)
Backend Development: REST APIs, Flask, API Integration, LangChain
Databases: SQL, MySQL, ChromaDB (Vector Database)
Core CS: Data Structures, Algorithms, OOPs, DBMS, Computer Architecture
Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Linux
Emerging Tech: Generative AI, RAG, Distributed Computing (Basic)

Projects

RAG-Based Document Q&A System — Python, LangChain, ChromaDB, LLM

- Developed a document question-answering system enabling natural language queries on PDFs and reports using Retrieval-Augmented Generation (RAG).
- Implemented document chunking and embedding using Sentence Transformers and LangChain.
- Stored embeddings in ChromaDB for semantic search and integrated LLM for context-aware responses.
- Built an interactive Streamlit interface demonstrating end-to-end AI application workflow.

Twitter Sentiment Analysis Dashboard — Python, TensorFlow, LSTM, Streamlit

- Built NLP-based sentiment classification system using LSTM deep learning model.
- Integrated Twitter API for real-time data collection and preprocessing.
- Developed Streamlit dashboard for sentiment visualization and trend analysis.

Crop Recommendation System — Python, Scikit-learn, Pandas

- Developed ML model to recommend optimal crops using soil nutrients and climate data.
- Implemented Random Forest and SVM algorithms with feature engineering.
- Achieved 85% prediction accuracy through model evaluation and cross-validation.

Certifications & Achievements

- AWS Certified Cloud Practitioner – Amazon Web Services (2024)
- 5th Position – University Hackathon (2024) out of 50+ teams
- Silver Medal – 9th Convocation, Adamas University
- Merit Scholarship – Adamas University (2024–2025)
