Professional Summary

Aspiring Prompt Engineer and AI Developer pursuing a Master of Computer Applications (MCA) with a strong foundation in Python, SQL, Natural Language Processing, and Generative AI. Hands-on experience using Large Language Models including ChatGPT, Gemini, Claude, and GitHub Copilot for prompt design, code generation, debugging, content creation, and workflow automation. Developed AI-powered applications involving sentiment analysis, computer vision, and data visualization using Python, Streamlit, and NLP libraries. Strong problem-solving skills demonstrated through 100+ LeetCode problems and a passion for building practical AI solutions that improve productivity and user experience.

Technical Skills

- **Languages:** Python, Java, SQL, JavaScript, PHP
- **AI & Prompt Engineering:** ChatGPT, Gemini, GitHub Copilot, Claude
- **Frameworks & Libraries:** Streamlit, NLTK, Matplotlib, Seaborn
- **APIs & Tools:** REST APIs (Twitter API), Git, Jupyter, Power BI, XAMPP
- **Cloud & Databases:** AWS (Cloud Practitioner), MySQL, ODBC

Education

Master of Computer Applications (MCA)

VIT Bhopal | CGPA: 9.09

Bachelor of Computer Applications (BCA)

Adamas University | CGPA: 9.15

Achievements: Silver Medalist, Merit Scholarship (2024–2025)

Projects

Affiliate Marketing Platform (LinkPlss)

PHP, MySQL, HTML/CSS/JS, PowerBI

- Built a full-stack affiliate link management system using PHP and XAMPP for user authentication, product tracking, and click-through logging.
- Connected MySQL to PowerBI via ODBC to build real-time dashboards tracking CTR, product ratings, and profile visits for creator monetization.
- Developed a responsive, mobile-first frontend using HTML, CSS, and vanilla JavaScript for seamless product sharing.

Twitter Sentiment Analysis Dashboard (TrendFeel)

Python, Streamlit, Twitter API, NLP

- Engineered an end-to-end ETL pipeline in Python to fetch live tweets via the Twitter API (Tweepy), implementing advanced text preprocessing (removing emojis, URLs, stopwords) using NLTK to sanitize unstructured social media data.
- Leveraged VADER and TextBlob libraries to classify tweet sentiments into Good, Neutral, and Bad categories, effectively capturing social media slang and context for real-time public opinion tracking.
- Designed interactive visualizations (pie charts via Seaborn) and WordClouds using Streamlit, and successfully deployed the application on Streamlit Cloud for immediate accessibility.

NutriScan AI – Smart Nutrition Analyzer

Python, YOLO, Streamlit

- Developed an AI-powered food analysis system that detects food items and estimates nutritional values.
- Engineered a complete data pipeline (image preprocessing, classification, extraction) and used AI tools to generate recommendation algorithms.

Certifications & Achievements

- AWS Cloud Practitioner (2024)
- ServiceNow Certified
- Data Structures & Algorithms: 100+ problems solved on LeetCode
